

OFFMAIN

Water Mist Lance

PRODUCT SHEET

The **OFFMAIN Water Mist Lance** offers superior results if it comes to container fire fighting on board. Specially, when the fire is difficult to access. It **complies** fully with the **IMO regulation** for Water Mist Lance for containerships. This is an easy way to get Water Mist inside a container without opening it. Fast response and efficient extinguishing with small droplets and low water consumption is a winning concept for this type of operation.

Benefits

As the water is directed at the hottest part of the fire in the form of a finely dispersed mist, the result is that virtually all of the water evaporates. The more water evaporates, the faster the extinction process develops. Due to the low level of water consumption, the water damage is reduced significantly compared with normal hoses.

Unique concept

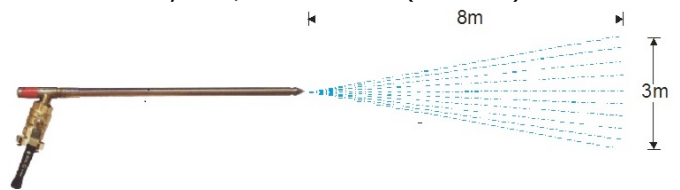

The OFFMAIN fire axe makes it easy to cut a hole in the container so the Lance can penetrate; the divider with shut-off valves for each outlet is used to distribute the extinguishing water to several Water Mist Lances.

Simple storage and transport

To provide simple storage and make it easier to transport, the lances and accessories are put in a portable bag. The holster is standard in the OFFMAIN Water Mist Lance kit.

Light weight

The water mist lance is made from stainless steel and weighs approx. 1.1 kg. Each fire nozzle consumes only 70 l/min at 6 bar (0.6 MPa).

THE OFFMAIN Water Mist Lance Kit		
contains:		
OFFMAIN Water Mist Lance		3 pcs
Firefighting axe		1 pcs
Divider with ball valves but incl. adaptors		1 pcs
Holster		1 pcs
