Training

Training on board (ship)

- Preparing drills
 - This course is developed to help officers on board to prepare realistic drills. In the course topics like Aims and Objectives and Learning outcomes will be discussed. By completing this course officers will have the ability to prepare drills like: MOB-drill, Search and rescue-drill, firefighting-drill, Communication-drill
- BA exercises
 - During the training the participants will learn the basic principles on working with BA. In the theory session participants will learn about the system and also about the physics. In the practical session participants will learn all the skills on BA like: walking with BA, moving blind with BA, BA shuffle, changing cylinders,
- Communication exercises
 - In this session the participants will learn how to communicate in a proper way with Radio's on board.
- Fire scenario on board
 - Setting up a firefighting scenario together with the officers on board where all the aims and objectives come back in the scenario. With use of smoke machines and other training equipment the participants get almost a real live fire scenario
- Search and Rescue on board
- Crowd management
- Train-the-trainer on board
 - In this session the participants learn how to become a trainer and how to setup an efficient training
- H2S training
- H2S awareness
 - By completing this course the participants will have gained a comprehensive understanding of the risks and precautions involved with H2S. Items like: gas measuring, detection, actions to be taken etc. will be discussed during the session
- Medical First Aid
- ISPS Code
 - In this training the participants will get an understanding in ISPS
- Port Facility Security Officer
- SSO (Ship Security Officer)
